

City University – Bayes Business School Scholarship

City University London, established in 1894, is widely recognized as a leading institution for Shipping and Financial studies.

Within the university, Bayes Business School holds great importance and influence in these fields, and recognizing the value of postgraduate education, Navarino management decided to offer a scholarship in the course. The recipient of this scholarship will be selected by the university's scholarship committee.

In April, the dean of the university visited Navarino to solidify our collaboration for the academic year 2023-24, with a possibility of extending it for two more years. As a result of this partnership, in October, our CEO received a heartfelt letter of gratitude from the beneficiary student. We take immense pride in providing this young individual with an invaluable opportunity to advance in life.

Supporting Flooded Villages

In early September, Greece experienced severe weather conditions that caused significant damage, particularly in the central region of Thessalia. Heavy rainfall resulted in the flooding of the main rivers and the bursting of nearby dams. As a result, over 10 villages had to be evacuated, leaving many people displaced from their homes, with some unable to return.

Navarino responded to this crisis on two fronts. Firstly, we contacted local crisis managers and mobilized our personnel to gather specific food and cleaning products.

Along with our company's contribution, our staff were able to put together five pallets of supplies, which were promptly sent to local distributors for distribution.

Secondly, recognizing the medical needs of the predominantly elderly population affected by the flooding, we decided to donate a state-of-the-art mobile cardiograph to the local Health Centre.

Greek Embassy, London AED donation

Continuing with our Navarino UK – Automated External Defibrillator (AED) installment program, we visited the Greek Embassy in London during the summer to express our intention of installing an automatic AED system.

The purpose of this system is to be prepared for any unforeseen incidents that may occur within the embassy premises, as it receives a high number of daily visitors.

Our team of experts from the UK visited the embassy to install the system and conducted a three-hour seminar for 10 members of their staff on how to use it and life-saving techniques.

Nurturing Future Tech Leaders

Navarino, recently took a significant step towards nurturing the next generation of tech enthusiasts. The company proudly sponsored a school hackathon competition at St Catherines School in Athens, aimed at fostering IT skills and cultivating a passion for technology among students.

With several schools participating, and around 200 students taking part, the focus of the hackathon was on 'greener shipping,' aligning with Navarino's commitment to sustainable solutions within the maritime industry. Students were tasked with designing robotics solutions that contribute to the advancement of environmentally-friendly shipping practices.

The champions, Zanneios, have been offered the opportunity to spend a day at Navarino, receiving personalized mentorship from industry experts. This hands-on experience will provide the students with a glimpse into the real-world applications of technology in the maritime domain.

Basketballs for Piraeus high schools

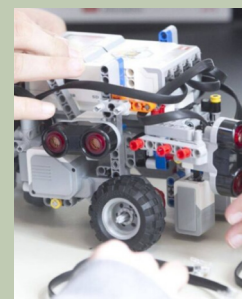

Basketball has always been a beloved sport at Navarino, and we wanted to share our passion with the local schools in Piraeus.

Our CSR department reached out directly to the mayor's office to express our interest in donating 200 Spalding basketballs to twenty high schools in the area, amounting to ten basketballs for each school.

In early December, we delivered the basketballs to the city's depots and distribution to the schools has already begun. We hope that this gesture will encourage more children to get involved in the sport!

World Robotic Olympics in Panama

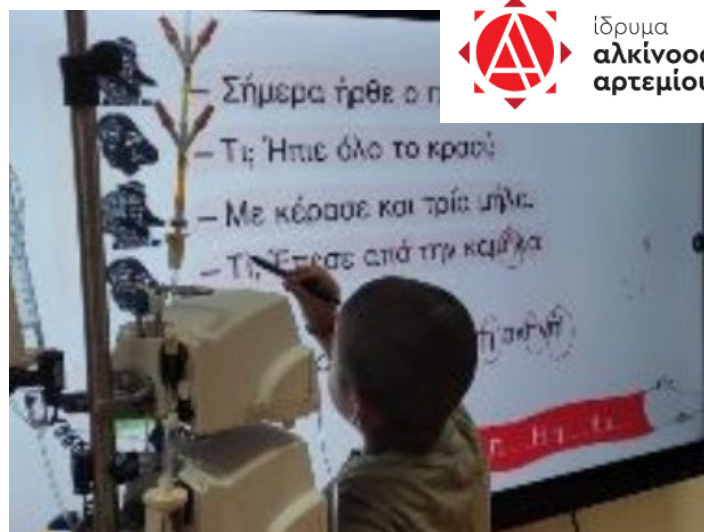

Always eager to support young individuals in their technological endeavours, Navarino agreed to finance the Piraeus-based "JoFre" robotics team trip to Panama for the World Robotics Olympics. The team had been diligently training for 10 hours a day leading up to the competition.

In early November, accompanied by their parents, the four-member team travelled to Panama City for a four-day trip, two of which were dedicated to competing in the Olympics.

They ultimately achieved 8th place out of 90 teams from around the world, an accomplishment they can be proud of. We extend our congratulations to this inspirational Greek team and wish them well in their future endeavours.

Artemis Artemiou Clinic for Children, Nicosia Cyprus

In early 2023, Navarino CY informed our CSR department about the "Alkinoos Artemiou Foundation" for children in Nicosia, Cyprus. This foundation supports children from Cyprus and their families in the fight against various types of cancer. It was established in 2021 in memory of Alkinoos, a young child who tragically lost his battle with the illness. Upon learning about this important work, we reached out to the foundation's management to offer our assistance in any way possible.

Our local office purchased a "dynamic" 80-inch touch screen for the clinic's lobby, providing an interactive, fun experience for all children visiting the premises.

For more information about the Alkinoos Artemiou Foundation, please visit www.alkinoos.org
